Quality of skin and life study Global company Japan

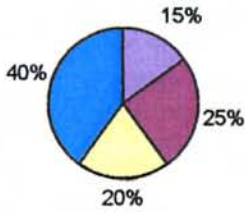

The study was conducted among 100 women during the second quarter of 2003.

Each woman had to take 200 mg of GliSODin® per day during two weeks and then was ask to fill out a questionnaire on various quality of skin and quality of life criteria.

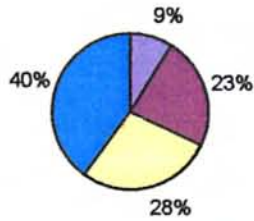

87 women noticed on overall improvement in the quality of their skin and 73 in the quality of their life (see attached charts for details by item).
